Rice University School Mathematics Project Classroom Observation Protocol

Teacher	School	
Observer	Date	
	Conference the teacher the materials that the teacher brought in preparation room observation	
	her to give a brief description of what will take place during the class period with both what the teacher will be doing and what students will be doing.	h an
Ask the follo	owing questions if necessary or appropriate:	
• What	t pre-requisite knowledge do you feel the students need before beginning the less	son?
• What	t lesson preceded the lesson you will teach?	
• What	t manipulatives and/or technology will you and the students be using in this lesson	on?
• How	will you determine that students understand the concept being taught?	
• How	will you differentiate instruction if needed?	

Rice University School Mathematics Project Classroom Observation Instrument

I.

Other

During the observation, you should take running notes, focusing primarily on the teachers' interactions with students and students' interactions with each other. Write the time and number of minutes the class was engaged in each class strategy (i.e. teacher-led, student group work, and individual student work). Include topics and activities. You should provide clear descriptions of observed activities and behaviors. Whenever possible, record the exact words used. Abbreviations may be used (T for teacher, G or G1, B or B1 etc. for the students.) It is important to ask for a copy of any worksheets that are used.

As soon as possible after you have completed the observation, you may re-write the rough notes into a more polished narrative for legibility. Additional comments should also be written as a narrative to include a detailed description of the classroom, materials used during the lesson (if not listed on this form) and instructional factors that impact the learning environment and the learning process. The observer should complete the following checklists to help describe the classroom and instruction. On the last page, please draw a ½ page to one-page map of the classroom to show the seating, displays, etc.

Seating arrangement:				
Students have assigned seats.				
Seating appears to be random.				
Desks are arranged in rov	ws and columns.			
Desks are arranged in ser	ni-circles.			
Desks are arranged in clu	sters (more than two).			
Tables are used, not desk	S.			
Desks are arranged in pai	irs (side-by-side/facing each otl	ner).		
Walls:				
Student-generated work				
Math-related				
Unrelated to mathematics				
Administrative information (rules of behavior, bell schedule, etc.)				
Motivational posters				
Students:				
Total number of students				
Complete the table with nur	nbers.			
Ethnicity	Male	Female		
White				
Black				
Hispanic				
Asian

Date				
Post- Observation Conference Discuss the classroom observation with teacher. Ask the following questions:				
	A)	What do you think went well during the lesson?		
	B)	What was the most successful part of the lesson?		
	C)	What was the most difficult part of the lesson?		
	D)	Will you change anything the next time you teach the lesson? If so, what?		
		nonest in providing any feedback that the teacher asks for—accentuating positives but ressing any errors in mathematics or pedagogy.
